Subject: Bug in 3K CRAM

To: Orr, Overton, Quarterman, Winfield, Mann, Burns

**XEROX**

The new batch of 3K CRAM boards have an error on them. There is a jumper wire from A61-5 to A60-8 (p. 3 of fabrication instructions) that should not be there. It causes flakey Ethernet behavior on some machines. I found this error during the last round of debugging, but SPG failed to delete this jumper from the fabrication instructions, so it is likely that any boards you have received to date contain this error.
